BENEFITS

COMPLEX SEARCH

Complex search components making it an essential tool for meeting GDPR and other regulatory requirements.

CUSTOMISABLE

Boolean Search allows for fully customisable and detailed reporting gives you full insight to your Unstructured Data, now and forever.

E-DISCOVERY

SISCIN with Vue-X provides advanced content indexing, search capabilities to analyse, identify, locate, retrieve and delete data for DSAR or e-Discovery management.

FILE FORMATS

SISCIN with Vue-X uses windows native iFilter capability to scan documents and files for any text that they contain. This text is then used by the Vue-X engine to create a comprehensive searchable index of your document/file store.

Including all common Mime, Text, MS Office, Zip, HTML formats. For most SISCIN installations the only other iFilter that is typically required is the Adobe provided PDF iFilter. With this standard set of filters loaded on your SISCIN Agent server nearly all common file types are covered.

SISCIN with Vue-X - File Index

SISCIN with Vue-X, an optional extension for SISCIN File Analysis and Archiving Solution, the latest member of the SISCIN Family has been introduced by popular demand to assist with the Privacy by Design element of GDPR. It has searchable content capability for Unstructured File Data at its core, allowing unprecedented analysis of your Data to meet GDPR compliance standards. Clear and customisable reporting dashboards give a complete overview of files, enabling immediate action to be taken.

FEATURES

CONTENT SEARCH

Every user has the ability to fully customise search with options to search against "Watchpoints" or "Agents". Save previously used search templates and pre-select them for use as needed. Use saved filters for search criteria, saving time and repetition.

REPORTING DASHBOARD

Reports including: Name/Size/Created/Owner/Revision/Status/Location. Priority reporting list with results sorted by relevance. Ability to delete multiple files from their destination incl Archive. Export report results to share. Multi-policy action can be run on the result set: Archive, Delete, Quarantine (Move/Encrypt/Legal Hold). Preview/Tag or Annote one or multiple files.
