Advanced Indexing

New SISCIN VUE-X Advanced Indexing

Waterford Technologies is proud and excited to announce that SISCIN has significantly expanded the types of files that can now be keyword content indexed for VUE-X search. Prior to this update SISCIN relied on Microsoft IFilter Technology to extract keyword content from files using File Extension to determine file type. This limited keyword extraction to Microsoft and Adobe PDF extension types. Another limitation of IFilter is there is limited support for non- Microsoft/Adobe file types and purchasing these special IFilters are very costly. With this new update SISCIN can now extract keyword content from over 550 file types, regardless of file extension, and without the need to install special IFilters. This new technology improves the accuracy of your eDiscovery, DSAR and other related searches making sure that you meet your compliance obligations. Microsoft Office 365 search should be considered weak because it is extremely limited due to their reliance on IFilters.

Benefits
- Supports over 550 file formats without relying on the filename extension
- Identify and extract contents of packaged, archived, compressed, and other container files
- No IFilters to install/update and repair (IFilters need to be repaired frequently)
- Search for information confidently because keyword content is captured and indexed by document and not by file extension. For example, a file called budget.docx.FY2020 would not be indexed by Office 365 but it would be when using SISCIN VUE-X.

Supported File Types

ARCHIVE

DOCUMENT FORMAT	VERSION	EXTENSION
7-Zip		7Z
ACE[1]		ACE
Apple Disk Image[3]		DMG
ARJ		ARJ
Bzip2		BZ2, TBZ2
ESTSoft ALZip		ALZ
ESTSoft EGG		EGG
ISO Disk Image		ISO
Java Archive		JAR
LZH		LZH
Microsoft Cabinet		CAB
Microsoft Office Binder		OBD
RedHat Package Manager		RPM
Roshal Archive	1.5, 2.0, 2.9, 5	RAR

ARCHIVE (CONTINUED)

DOCUMENT FORMAT	VERSION	EXTENSION
