SISCIN - FILE MANAGEMENT SOLUTION

SISCIN is a File Analysis and Archiving solution hosted in Azure. It's a single dashboard for full visibility of your entire file server data. Allowing the creation of policies based on analysis of your data for retention, deduplication, deletion or archiving, enabling full control in managing your file data. SISCIN allows flexible storage control to archive directly to the Cloud or locally. Giving organisations the performance and scalability of the Cloud with their existing server infrastructure.

FEATURES

MAP (ANALYSIS)

Full drill-down reporting analysis of file data identifying attributes such as owner, type, size, location, age etc.

MANAGE (CREATION OF POLICIES)

Now you understand your data, you can control your data by implementing deletion retention, deduplication, archiving and analysis policies including 'what if' analysis.

MOVE (SELECT DATA DESTINATION)

Move your data securely in a compressed and encrypted format locally or directly to the Cloud (AWS and Azure).

"Waterford Technologies' Solutions and Support enables us to address the challenges in managing compliance, GDPR, and Data Protection. This is of paramount importance to us due to the highly sensitive nature of our email and file data".

Noel Galligan, IT Manager
Pobal

BENEFITS

Reclaim Storage Space, Reduce Costs

Management of Tier 1 Storage. Removal of redundant, obsolete, non-business critical data to Tier 2 or 3 Storage. Leading to the reduction of back-up costs. The choice of multiple storage pools to meet your organisations data profile.

Reduction of Time

Reduce the pressures and demands on IT by giving them the tools to control and manage their unstructured file data from one central dashboard.

Security

Bit Level Encryption - SISCIN compresses and encrypts data on your servers before transfer. Selected files can be split and stored in different Cloud or Local Tiered Storage locations and with different Cloud providers for additional security.

Intelligent Management

Empower Data Managers to understand, identify and clean your data. Remove obsolete data and clean your data in preparation for GDPR.

eDiscovery

SISCIN with Vue-X provides advanced content indexing. Giving you search capabilities to analyse, identify, locate, retrieve and delete data for DSAR or e-Discovery management.

Immutable File Storage

SISCIN TripleLock archives allow organisations to quickly implement WORM technology that makes immutable "locked" copies of their data within the cloud, thereby providing comprehensive ransomware protection

"Transparency and accountability are paramount in the way we manage our data. SISCIN and MailMeter backed up with a fully managed service from the team at Waterford Technologies ensures we are best placed to meet the ever-increasing data protection obligations".

Gerry Philpott, IT Director
RehabCare

"We are extremely happy, the burden of dealing with mounting files, emails and complex search is gone. We are now confident that we have a solution to deal with and data subject access requests if they arise".

Liam Sinnott, IT Manager
Health Research Board
